

SWTPC 6800 BLACKJACK PROGRAM BLKJAK-1

This program allows the operator to play the game of BLACKJACK at the serial control terminal. The program uses memory from 0100₁₆ to 0309₁₆ and from 1000₁₆ to 15F7₁₆ and must be run in a 6K system.

To use the BLACKJACK program load it in step by step using the MIKBUG^R memory change function or through cassette or paper tape. The program counter addresses A048₁₆ and A049₁₆ must then be set to 10 and 00 respectively. The BLACKJACK program can now be initiated as described in the "Go to User's Program" section of Engineering Note 100. If the program was loaded correctly the computer should respond with "THIS IS SWTPC 6800 BLACKJACK.....TRY YOUR LUCK....!" The computer will then give some instructions. When you want the shuffle to end type in any character and the computer will respond with a scoreboard and the dealt cards. Typing an "H" will deal you another card while an "S" will not. After the game is over and the winner decided the program will lock up until any character is entered. After the character is loaded a new scoreboard will print and a new game will start. If in the middle of a game the SHUFFLE function appears wait several seconds and enter any character.

The original source listing of this program is contained in the Motorola M6800 User Library, however, the program was slightly modified to enable it to work with the SWTPC 6800 Mikbug^R firmware and CT-1024 terminal system. These modifications did not change the internal workings of the program or its ability to run on TTY's or other type terminals.

The program sends out control character commands to home-up and erase the screen on those CT-1024 terminal systems having the CT-CA computer controlled cursor option. You should program the jumpers on your CT-CA option so a control P (10₁₆) generates a Home-Up and Control V (16₁₆) generates an Erase to End of Frame (EOF).

If after loading your BLACKJACK program it fails to work properly go back and re-check each memory location from 1000₁₆ to 15F7₁₆ to be sure that the program was loaded correctly. If it was and the program still does not work properly run the two memory diagnostics described in the Software Section of the System Documentation Notebook on the memory being used to verify that the memory being used is operational. Running the diagnostics of course will cause whatever was stored in the memory being tested to be erased, so the BLACKJACK program should be re-entered.
